

Monday Maritime Matters

Description

With luck perseverance, this will beget a series of weekly postings to cover issues of maritime interest.

My jumping off point will be to bring forth some history of the US Navy, specifically keying on notable people, providing background on them, and then the ships named after them.

The impetus? A wonderful book, ["Six Frigates"](#) by Ian Toll. It is the story of how our Navy came into being, and it is chock full of interesting discussions regarding the very beginnings of our Nation, The Constitution, early maritime commerce issues, and many detailed facts about the (this is a euphemism) "polite" verbal and written interactions between politicians, ship builders, and Naval Officers of the day.

Subject number 1: [Joshua Humphreys](#). Born 6/16/1751. Native of Pennsylvania, and a shipwright. A Quaker by religious upbringing, yet did not shy away from supporting the Revolutionary War effort, as many of his religion did as a matter of doctrine.

Why is Joshua Humphreys important? He was the first "Naval Ship Constructor" for this United States. Being a trained shipwright in a busy seaport (Philadelphia), he was chosen by the Continental Congress, along with John Wharton, to design our first warships, with a plan of building 13 light frigates. These ships were poorly built and poorly outfitted. The ignoble end to that phase of building our fledgling Navy amount to seven of the frigates being captured by the British, and four more being destroyed to avoid capture.

Over the next several years, after the war ended, the debates raged as to whether we even needed a Navy, and if so, what would it be used for. The discussions between the Founding Fathers became rather acrimonious at times, proving today's politics might just be "normal" by historical standards. In the meantime, American merchantmen roamed the oceans of the world, having a neutral status in the conflict between the British and the French, and making a lot of money along the way.

Much more is covered in this period, before we set out to put a Navy to sea, which make for fascinating reading about international diplomacy and economics, but that's for another realm.

When the United States of America, in 1794, the straw that broke the discussion's back, as it was, was what to do about the Barbary Pirates, who continued to capture our merchant vessels in the Mediterranean, and enslaving their crews. President John Adams had had enough, as did Congress. On March 10th, 1794, the House passed, by a margin of 50-39, an "Act to Provide a Naval Armament." The authorization was to build six frigates, four rated at 44 guns and two at 36. The authorization further stipulated that the purpose of the ships was to police the Mediterranean against piracy and, in the event a truce was reached with the Dey of Algeria, the building program would come to a stop. Contrast that with the mood of today.

Secretary of War, Henry Knox was tasked to implement the ship building program. He turned to Joshua Humphreys. Joshua had become a master shipwright and owner of a shipyard at the age of 20, when John Wharton died. He now had many years of experience, including the conversion of merchant

vessels as warships.

Joshua Humphreys was the visionary that conceived, pitched and built the new frigates, smaller and faster than British “Ships-of-the Line,” yet larger and more powerful than European frigates. Tough enough to stand up for a fight, yet fast enough to make more sail and run away to return when conditions were better. Not only would these vessels handle the light, lesser armed ships of the pirates, they would be suited for defending the commerce and Nation against the established navies of the world.

The work did not flow easily to design or build the ships. Toll discusses the personality conflicts between Humphreys and Josiah Fox later in the process. Secretary Knox, not a sailor by profession, was involved.

The “Six Frigates:”

Frigate	Guns	Shipyard	Captain	Constructor
UNITED STATES	44	Philadelphia, PA	John Barry	Joshua Humphreys
CONSTELLATION	36	Baltimore, MD	Thomas Truxton	
CONSTITUTION	44	Boston, MA		Edmund Hartt
PRESIDENT	44	Brooklyn, NY	Thomas Truxton	Christian Bergh
CONGRESS	38	Portsmouth, NH	James Sever	James Hackett
CHESAPEAKE	44	Norfolk	James Barron	Joshia Fox

[USS HUMPHREYS \(DD-236\)](#)

The details flow, but now the second part of the story: In honoring the man who conceived and put to sea our first warships, we have named only two vessels. The first HUMPHREYS (DD-236 and later APD-12) was launched 28 July 191 and commissioned in Philadelphia, PA July 21st, 1920. The ship saw action the Crimean War in the 20s and in the 30s was involved in developing tactics for carrier

battle group operations. During WWII, initially the HUMPHREYS was an escort ship between the West Coast and Hawaii, then was converted to an APD to conduct high speed landing operations. Sailing to Australia, HUMPHREYS served in the Solomon Islands Campaign and at New Guinea, and later delivered UDT 5 to Leyte Gulf on 18 Oct, 1944 and also supported the invasion of Okinawa. She was decommissioned Oct 26th, 1945 and sold for scrap.

USS JOSHUA HUMPHREYS (AO-188) later USNS JOSHUA HUMPHREYS (T-AO-188)
The second ship of the KAISER Class of fleet oilers was commissioned sometime in the early-80s to replace the aging ships of the logistics force. Beginning her life as a commissioned naval vessel, she was later transferred to the Military Sealift Command and manned by a merchant marine crew. She is presently out of service, at the Inactive Ship Facility in Philadelphia, PA.
