

Stop the Murdoch (Flt 93) Memorial Blogburst: Why the draglines were removed from the Flight 93 crash site

Description

When the passengers and crew of flight 93 smashed their murderers to nothing on an open expanse of western Pennsylvania coal country, two towering sentinels stood silent witness to the heroic tragedy.

“Up on Skyline Rd.,” the news shot around Shanksville and Somerset, “up by the drag lines”

The drag lines, as seen from what will be the center of the giant [Mecca-oriented crescent](#) that is to be planted on the flight 93 crash site. (Photo by [Alec Rawls](#), 2006.)

It is hard to imagine a more fitting marker than these twin colossi. Before the hijackers could send Flight 93 into the White House or the Capitol building, a random draw of forty of our fellow countrymen massed a towering determination to fight back. Their effort to save their own lives ended beneath those artifacts of Pennsylvania’s own native grit and ingenuity, but their success in defending their country will live forever.

Those silent sentinels could and should have endured as well, and they would have, if not for one man who was determined to see them go: architect Paul Murdoch, the designer of the terrorist memorializing Crescent of Embrace design. As the press [reported](#) at the unveiling of the crescent

design:

The Flight 93 temporary memorial, the draglines and Skyline Drive will be removed to leave the landscape as natural as possible, Murdoch wrote in a narrative that accompanied the design.

The drag lines were supposed to stay

The presumption from the beginning was that the drag lines would stay. They were actually the [first items of property purchased](#) for the new national park.

Support for keeping the drag lines, whatever memorial design was chosen for the crash site itself, was virtually universal. The local historical society was for keeping the drag lines:

Several draglines still stand there, idled since the crash interrupted the mine work. Randy Cooley, director of the Southwest Pennsylvania Heritage Preservation Commission, said that equipment should stay, as part of the story the memorial will tell. The excavating machines often are the first things visitors to the memorial site see, he said. The booms rise high over the field. They cast shadows, and show what the land once was.

“They’re touchstones,” Cooley said. “For many of the people on that plane, that may well have been the last thing they saw.” [\[2003\]](#)

They were also meaningful to the local population:

The cranes, which served as drag lines for a long-idled strip mining operation, are synonymous with the area, residents said. “When I think of (Skyline Drive), I think of those drag lines,” said Erica Zeigler, president of Shanksville Borough Council. “They’re something everybody around here associated with that road.” [\[2005\]](#)

]

Memorial Project manager Jeff Reinbold acknowledged the hard feelings about the removal of the drag lines:

“You wish you didn’t have to do it. But this was a celebration of the process,” he said. [\[ibid.\]](#)

Why was Murdoch determined to have the drag lines gone?

Because a crescent that Muslims face into to face Mecca is called a [mihrab](#), and is the central feature around which every mosque is built. (Some mihrabs are pointed-arch shape, but the prototypical mihrab is crescent shaped.)

Very simply, Murdoch could not allow his terrorist memorial mosque to be tainted by extraneous infidel artifacts. Those drag lines would have risen up right behind the giant mihrab, disturbing what is

supposed to be an undisturbed space within which the Muslim believer can turn face his god for prayer.

Perhaps worst of all from Murdoch's perspective was the huge American flag that [coal miners attached](#) to one of the booms the week after 9/11:

This flag was history. If Murdoch did not get rid of the drag lines, he could not get rid of the American flag, rising up 180 feet behind his giant mihrab. (Photo by [Alec Rawls](#), 2006.)

Unacceptable: the jihadists turn to face their god, and see an American flag?

This mosque interpretation is no stretch. Murdoch provides endless redundant proof of intent, as when he [repeats the Mecca orientation of his giant crescent](#) in the crescents of trees that surround the Tower of Voices part of the memorial.

Still hoisting a flag

When the hijacker is finally tackled and we have a chance to turn to less critical matters, like how to design a proper memorial to OUR heroes instead of to Paul Murdoch's heroes, one of the costs to be accounted will be the loss of the iconic drag lines. At least Murdoch was not able to destroy them entirely, as [22 tons](#) of steel from the scrapped machinery is being used in the construction of the USS Somerset:

The [USS Somerset](#) will be a sister ship of the USS San Antonio (seen here), so the drag lines will still be hoisting a flag.

Interestingly, the single physical requirement set down for design competition entries was that they should respect the rural landscape and leave it as it was. Paul Murdoch's crescent design is the only one of a thousand entries that violates this lone rule, first by [building a raised causeway across the wetlands](#) (necessary to extend his crescent to the full typical Islamic crescent shape, covering 2/3rds of a circle of arc), and then by excising the drag lines, which everyone agreed were central to the historic nature of the site.
